Final Client Meeting/Transfer

- We met with Josh on Sunday and we talked about doing the transfer of the repository either Thursday or Friday
- Again, he was very appreciated for all the work and was happy how the website turned out

Successful Actions

- Switching from MySQL to Firebase
- React JS and Bootstrap
- Weekly meeting with team and client

Won't Do Again Actions

- YouTube API
- MySQL

Missed Actions

- Testing
- Shot Charts

Final Thoughts

- Bryce - I think that we really had a lot of features, especially with having to learn a new framework (React), and learning the correct way to build a website from the ground up. Also things like choosing the correct testing library, and the best type of DB for the data, these decisions were hard to make. But, I honestly felt like it went just about as well as it could have given all these things I've mentioned.

- Justin - This was one of my first times working on a pretty big project, with a real client who could provide us feedback on our work. I think we did a great job with what we were able to accomplish for the site and what we were able to provide to Josh in the amount of time we had. There were certainly decisions that we had to make for the project and at times it was tough but I feel like we made the right decisions. In the end the experience was well worth it to get us prepared for a career after graduation.

- Zach - This was my first experience with working with a real life client and I feel like I learned a lot throughout the two semesters. For the amount of time we had on the project, I feel like we implemented a lot of features that our client wanted from the start. So, I am satisfied on the status and how far we have come since the beginning of the project.

- Jacob - This was a large undertaking for 5 college students, who most had little to no experience in real world coding and for the most part we met expectations for the time and resources we were allotted.

- Corbin - We took on a complex project, and it provided a great learning experience. I feel more prepared for life after graduation, and I am glad I got such a great opportunity.
